

The Future Begins with Research

Ten Research Centers

Ten specialized, interdisciplinary research centers in seven departments form the basis and inexhaustible source of ideas from all the degree programs

From these ideas, we develop research projects that are often aimed at specific practical applications. Based on these projects, which are derived from the major technological, economic and social issues of the future, we want to contribute to the sustainable improvement of our world in the coming years and decades.

Five Research Areas

Our research profile is characterized by five interdisciplinary research areas.

They are based on forward-looking disciplines, which we strengthen on the one hand, and network in innovative ways on the other. This creates new potential that we use in a sustainable

and pioneering way in our research and development. In doing so, we are guided by the Sustainable Development Goals (SDGs) of the United Nations. Our research focuses on the SDGs Health and Well-being (3), Quality Education (4), Industry, Innovation and Infrastructure (9), Reduced Inequalities (10), Sustainable Cities and Communities (11).

and Design**

R&D on the Road to Success

As Austria's largest university of applied sciences, the diversity of our subject areas gives us a strong lever for promoting cross-disciplinary projects. This is what sets us

apart from other universities and universities of applied sciences and makes us a pioneer in the networking of disciplines and their subject-specific expertise in research and development.

ESBH – efficient, safe and structural design of prisons in Austria

The project goal is to develop sustainable building standards based on social, economic and ecological sustainability.

ELSA – eCounseling & Learning-System for Attention deficit hyperactivity disorder (ADHD)

The ELSA app provides valuable tips, procedures and information to support families and legal guardians of children with ADHD.

Circular Packaging Design Guideline

The guideline explains the basics of sustainable packaging design and provides recommendations for a recyclable design of packaging systems along the entire value chain.

What do we stand for in research? We are:

- **interdisciplinary**
- **ethically oriented**
- **sustainable**

Numbers and Facts 2023/24

R&D order backlog as of July 31, 2024
Sum of the volumes of all ongoing and
commissioned projects: **12 M €**

Research: The most important third-party funders by funding volume

**“Our researchers
are our most
valuable
resource”**

Elisabeth Haslinger-Baumann,
Vice Rector for Research and Development

We pave the way for academic careers.

12 internal doctoral grants

Immerse Yourself in the World of Research

18th Research Forum of the Austrian Universities of Applied Sciences 2025 “Doing Research - Shaping the Future”

Austria's universities of applied sciences are addressing the most pressing questions of our time and are looking for answers that will shape our future through application-oriented and basic research. The 18th Research Forum reflects this by bringing together researchers from different disciplines and offering a platform for innovative approaches and practical solutions, in line with the motto “Doing Research - Shaping the Future”. The conference tracks are dedicated to different areas of shaping the future - from technological progress and sustainable development to social and economic transformation. This year, for the first time, the focus will be on the presentation of particularly high-caliber leading edge research, which will be presented in a specific track.

Vienna Children's University

Every year, we open our doors to young researchers so that they can immerse themselves in the diversity of applied research. In experiments, something new is created from something old and we explore how reasoning and logic relate to statements and assertions. Since 2013, we have been part of the Vienna Children's University in order to inspire young people for science and research at an early age.

Long Night of Research

From IT security and racing cars to gait analysis and 3D printing of concrete, bones or hearts - we present interdisciplinary and application-oriented research activities at the Long Night of Research. In 2024 FH Campus Wien once again took part with 27 stations. The program offered short presentations as well as laboratory tours and visitors were able to try out for themselves how research works.

Ethical Thinking, Responsible Research

FH Campus Wien is the first university of applied sciences in Austria to have access to the expertise of its own ethics committee.

This interdisciplinary ethics committee supports researchers from all disciplines in identifying ethical issues in their projects and determining their implications for research activities.

It is guided by internationally recognized ethical guidelines. Questions relating to legal and data protection principles play just as much a role as compliance with good scientific practice and the correct treatment of vulnerable persons. The committee does not see itself exclusively as an authority for ethical votes, but enriches the research projects through its advisory activities.

FH Campus Wien

With over 8,000 students, FH Campus Wien is the largest university of applied sciences in Austria.

The location at Altes Landgut in Wien-Favoriten offers over 120,000 m² of state-of-the-art infrastructure for excellent teaching, research and continuing education.

Almost 70 degree programs are available in the Departments of Applied Nursing Science, Applied Life Sciences, Building and Design, Health Sciences, Social Work and Engineering as well as Administration, Economics, Security, Politics. Our strength

in carrying out interdisciplinary research projects is based on this range of disciplines. We use combined potential and bundle expertise in specialized research centers. We dedicate our application-oriented research to the major technological, economic and social issues of the future that will have a lasting impact on our world, thus ensuring the future value of our teaching. FH Campus Wien has excellent links with science, business, industry, the social and public sectors as well as the health sector. We offer many further and continuing education courses through the Campus Wien Academy. FH Campus Wien is also a founding member of the Alliance of Sustainable Universities.
